

IMPORTANT NOTICE

Limiting the Use of Plastic Straws

Help the environment!

Kindly note that we would like to stop the unnecessary use of plastic straws and only serve them **upon request**.

We seek your support in helping us to reduce this negative impact on our environment.

WHY?

Straws and other plastics cause harm to marine life in many ways. Birds, fish and other sea life consume plastics accidentally when they mistake it for food due to their lightweight nature. This plastic ingestion eventually works its way up through the food chain and poses a threat to humans. Plastic does not biodegrade, it breaks down into smaller pieces called 'micro plastics' which are even more dangerous for marine life.

Thank you for your usual cooperation.
